

21 CFR Part 11 Electronic Records Assessment

Quality-system evidence packet for investor and regulatory diligence

Company: Solaris Endovascular, Inc.

Prepared: 2026-05-27

Status: Synthetic company controls with public FDA context

Demo Use: Data-room ingestion and citation testing

Scope

- This assessment covers electronic quality management workflows for design controls, document approvals, CAPA, supplier qualification, training records, and release evidence.
- The document supports questions about whether the diligence data bank contains evidence of electronic record integrity and electronic signature controls.

Public FDA Context

- FDA guidance describes the agency's current thinking regarding the scope and application of Part 11 for electronic records and electronic signatures.
- FDA guidance discusses validation, audit trails, record retention, record copying, and legacy systems in the context of enforcement discretion.

Solaris Control Status

- Unique user accounts are active for eQMS users.
- Role-based approval workflows are active for document creation, release, and revision.
- Audit trails are retained for approval events and controlled-document revisions.
- Quarterly access reviews are planned, with the first review targeted for 2026-09-30.
- The eQMS validation binder remains open and is targeted for completion before pivotal-study enrollment.

Open Items

- Complete validation test scripts for design-history workflow.
- Formalize audit-trail review procedure.
- Document disaster recovery evidence for regulated records.
- Add second-person approval for design history file release.
