

OUS Registry Clinical Study Report

Synthetic observational evidence packet for Solaris Arc v2.3

Company: Solaris Endovascular, Inc.

Prepared: 2026-05-27

Status: Synthetic clinical data for demo ingestion

Demo Use: Data-room ingestion and citation testing

Registry Overview

- Study type: OUS observational registry.
- Sites: 5.
- Cases enrolled: 62.
- Clinical events committee: independent physician adjudication panel.

Performance Summary

- Technical success rate: 94.1%.
- Mean device navigation time: 11.8 minutes.
- Device-related serious adverse events: 0 adjudicated.
- All-cause serious adverse events within 30 days: 3, none adjudicated as device-related.
- Minor protocol deviations: 4.

Interpretation

- The registry provides useful early evidence of feasibility and device performance.
- The registry is not randomized and is not powered to detect rare adverse events.
- The pivotal study must validate procedural success and safety in a controlled, prospective U.S. study.

Agent Citation Test

- A good answer should cite this document for clinical success rate and adverse-event statements.
- A good answer should avoid claiming U.S. market clearance or clinical superiority.

Demo data room packet. Company-specific Solaris information is synthetic unless explicitly identified as public-source context.
