

Solaris Press Release and Entity Disambiguation Packet

Demo packet for testing name ambiguity and source attribution

Company: Solaris Endovascular, Inc.

Prepared: 2026-05-27

Status: Synthetic company releases with real-world diligence framing

Demo Use: Data-room ingestion and citation testing

Why This Matters

- Multiple real-world companies use the Solaris name across energy, mining, infrastructure, software, and media.
- A due diligence agent must not attribute third-party press releases to Solaris Endovascular unless legal identity, domain, issuer, and document source match.

Synthetic Solaris Endovascular Releases

- 2026-04-22: Solaris Endovascular announces design freeze for Solaris Arc v2.3.
- 2026-02-05: Solaris Endovascular expands OUS clinical registry to five sites.
- 2025-11-18: Solaris Endovascular opens San Diego pilot manufacturing line.

Attribution Rules

- Use issuer legal name first.
- Check domain ownership and investor-relations site.
- Check headquarters, industry, and product references.
- Flag low-confidence external mentions when legal identity is not confirmed.

Demo Question

- Ask: What press releases are available for Solaris, and are there naming risks?
- Expected answer: cite this packet and distinguish Solaris Endovascular from unrelated Solaris-branded entities.

Demo data room packet. Company-specific Solaris information is synthetic unless explicitly identified as public-source context.
