

SOC 2 and HIPAA Readiness Packet

Security and privacy diligence evidence for Solaris Endovascular

Company: Solaris Endovascular, Inc.

Prepared: 2026-05-27

Status: Synthetic control evidence for demo ingestion

Demo Use: Data-room ingestion and citation testing

Program Scope

- Solaris maintains cloud-hosted quality, clinical evidence, and investor diligence environments.
- The company uses role-based access controls, MFA, audit logging, endpoint management, encrypted backups, and vendor reviews.

SOC 2 Readiness

- Target readiness review: Q4 2026.
- Controls in scope: access reviews, change management, vendor risk management, incident response, backups, logical access, and security monitoring.
- Open item: formalize evidence retention and management review cadence.

HIPAA Readiness

- Solaris restricts identifiable clinical data and stores only minimum necessary clinical metadata in the diligence environment.
- Business associate agreements are required for vendors that handle protected health information.
- Open item: complete annual privacy training and finalize data retention schedules.

Investor Interpretation

- The security program is credible for a scaling medtech company but not yet mature enough to claim completed SOC 2 attestation.
- The agent should answer SOC 2 questions with readiness status, not certification status.

Demo data room packet. Company-specific Solaris information is synthetic unless explicitly identified as public-source context.
